2006-10

(Oct.) AmRad Engineering has developed the Turbolytic®200, a universal replacement capacitor using advanced thin-film technology. This device, which has six separate capacitors in a single continuous winding and uses jumper wires to "create" numerous different values. The Turbolytic®200 has broad implications for the "industrial-based" service equipment industry as well as for OEMs. The Turbolytic®200 encompasses 20 mfd to 450 microfarads. In the months ahead, we expect to cover the rang from 100 mfd through 1500 microfarads.
